

Job Title: Full Stack
Location: Austin/Round Rock, Texas

About Our Company –Printed electronics promise advanced functionality at low cost. Flexible solar cells, batteries, displays, sensors, and RFIDs are examples of advanced printed electronics. While these technologies have already reached the market, many others are currently being developed. To enable the development and manufacturing of this next generation of electronic devices, NovaCentrix offers state-of-the-art photonic curing tools, materials, and expertise.

Qualifications – Qualified candidates should have broad interest in electromechanical systems and machine control, as well as the manufacturing processes needed for production. The candidate should maintain the flexibility to meet strict deadlines, adjust work priorities, and enable the continuous progress of multiple projects.

Your Opportunity – As a full stack software engineer, you will be given the chance for a meaningful and recognizable impact in our company’s evolution. You will be part of small collaborative team working with a wide variety of technologies and products. Your responsibilities will include designing, prototyping, integrating, and sustaining innovative products. Our photonic curing systems are enabling new and exciting electronics manufacturing processes worldwide. You will have a large role in crafting that change.

Responsibilities:

- Design and develop web-based applications for machine control and monitoring
- Collaborate with electrical and mechanical engineers to develop system requirements
- Maintain and improve technical stack including back-end server

Qualifications:

- BS or MS in Computer Science, Electrical / Computer Engineering (or equivalent)
- 3+ years programming with Angular framework
- Experience with full stack application development
- Excellent interpersonal and communications skills
- Experience with LabVIEW and data acquisition is a plus
